

HIGH PERFORMANCE BUTTERFLY VALVE

G1L (Class 150)

G3L (Class 300)

APPLICATIONS

- Heating Hot Water
- Condenser Water
- Glycol
- Chilled Water
- Compressed Air
- Steam Rated - 2" - 12" 150 PSI for on/off applications and 50 PSI modulating
- Chemical Process
- Isolation and Throttling
- Domestic Water

MATERIALS & CONSTRUCTION

- Body Constructed of Carbon Steel
- Stainless Steel Disc and Stem
- Seats of Reinforced PTFE for Exceptional Chemical and Heat Resistance
- Welded Disc Pins
- Silicone Not Used in the Manufacture of this Valve

The NIBCO® Sure Seal® High Performance Butterfly Valve is ideally suited for commercial, industrial and mechanical HVAC services. Its use in other applications must be approved by the manufacturer.

BUTTERFLY VALVES

FEATURES

- Powder Coated Epoxy Finish
- One-piece Stem
- Direct Mount Actuation (ISO 5211 mount pattern)
- Live Loaded Adjustable Packing with Unique Flush-mounted Packing Gland
- Integrally Cast Disc-stop
- Dual Offset Design
- Blow-out Proof Stem
- Bi-directional Dead-end Service (arrow on body indicates preferred flow)
- Maximum Operating Temperature 400°F at 100 PSI
- 100% Production Tested Per MSS SP-68
- Sizes 2" to 36"

DESIGN CRITERIA

- MSS SP-68 (design)
- MSS SP-25 (markings)
- API-609 Seat Pressure/Temperature Ratings/Blow-out Proof Stem
- ASME/ANSI B16.34A, Body Pressure/Temperature Ratings
- ASME/ANSI B16.5 Flange Dimensions
- ISO 5211, EN 12116 Actuator Mounting Top Works
- ANSI Class 150 and Class 300
- Dual Offset Design

INTRODUCTION & FEATURED BENEFITS

NIBCO manufactures butterfly valves and actuators used in industrial piping applications such as chemical, food processing, pulp and paper, shipbuilding, e-coat phosphate paint systems, and pharmaceutical. NIBCO machines and manufactures parts in house with modern advanced computer-controlled machining centers to assure the highest standards in the industry. Every valve manufactured is tested to 110 percent of its full pressure rating as standard.

SEAT

Soft Seated

High Performance Butterfly Valve

Seat: PTFE (392°F/200°C)
 R-PTFE (482°F/250°C)
 GTFE (500°F/260°C)
 UHMWPE (200°F/93°C)

NIBCO® Sure Seal® High Performance Butterfly Valves have the following featured benefits:

- Direct mount actuation
- Live loaded adjustable packing
- Uninterrupted gasket surface*
- Consult factory for spiral wound gasket
- Bi-directional service
- Bubble-tight sealing
- One piece through shaft
- Welded disc pins
- Integrally cast disc stop
- Blow-out proof stem

Visit our website for the most current information.

*Consult factory for additional materials.

SEAT FLOW CHARACTERISTICS & NUMBERING GUIDE

Soft Seated

High Performance Butterfly Valves
Elasticity of the seat and fluid pressure assures perfect "bubble-tight" sealing.

NUMBERING GUIDE

*Max size for wafer style is 24"

Visit our website for the most current information.

ANSI CLASS 150 & 300 Cv VALUES

BASIC FORMULAS FOR Cv VALUE

Fluids	Pressure Condition	Cv Value	Legend
Liquid	n/a	$Cv = 1.17Q \sqrt{\frac{G_s}{\Delta P}}$	Q : volume rate of flow (liquid m³/h, gas Nm³/h) W : volume rate of flow (steam kg/h)
Gas	$\Delta P < 0.5 P_1$	$Cv = \frac{Q}{272} \sqrt{\frac{G_s (T+273)}{\Delta P (P_1+P_2)}}$	P ₁ : inlet pressure (liquid kgf/cm², gas/steam kgf/cm² abs.) P ₂ : outlet pressure (liquid kgf/cm², gas/steam kgf/cm² abs.)
	$\Delta P \geq 0.5 P_1$	$Cv = \frac{Q \sqrt{G_s (T+273)}}{236 P_1}$	ΔP : pressure drop P ₁ -P ₂ G _s : specific gravity of fluid
Steam	$\Delta P < 0.5 P_1$	$Cv = \frac{WK}{13.5 \sqrt{\Delta P (P_1+P_2)}}$	T : temperature of fluid (°C) K : correction coefficient to superheat 1 + 0.0013 x deg. °C of superheat
	$\Delta P \geq 0.5 P_1$	$Cv = \frac{WK}{11.9 P_1}$	* When P ₂ < 0.5P ₁ , use 0.5P ₁ instead of ΔP

OPERATION AND INSTALLATION

Pipe flange faces and valve faces should be cleaned of any residue and dirt.

Allow enough gap to ensure the valve will slip easily between flanges.

Center the flange gasket and valve.

Install valve in the closed position to prevent damage to the sealing areas.

Tighten all bolts to ensure a leak-free seal.

OPERATION:

1. The valve can be fitted with various operating devices such as lever handle, manual gear, pneumatic actuator or electric actuator.
2. By rotating the disc counter-clockwise to open or clockwise to close, the flow inside the pipeline can be regulated or shutoff - whichever is desired.

MAINTENANCE:

Regular maintenance is not needed. Occasional adjustment of the stem packing may be required using the gland flange studs and bolts. It is important to adjust these nuts evenly and not to over tighten. Failure to do so could lead to premature stem packing wear and eventual valve failure. In most cases, should a stem packing leak occur during operation, the packing/gland flange bolts can be tightened to correct the leakage.

This is accomplished by turning the gland flange nuts clockwise one turn at a time until leakage is stopped. Should adjustment fail to correct leak, packing can be replaced as steps listed under "Packing Replacement," or a new valve can be purchased.

Dirt and debris left in pipeline from construction can damage the seat or disc edge and cause seat failure. Should seat failure occur, follow the steps listed under "Seat Replacement" to correct problem.

1. Identify media in pipe. Protection against exposure to toxic and/or flammable liquids should be taken.
2. Depressurize pipeline and drain completely.
3. Make sure disc is in the closed position and remove valve and operator by reversing the installation procedures.

*Note: It is important that the valve operator always be attached to the valve while valve is under pressure.

PACKING REPLACEMENT (ONCE PIPELINE IS DEPRESSURIZED AND DRAINED.)

1. Remove operator and mounting hardware from top of valve.
2. Remove gland flange nuts and lock washers.
3. Remove gland flange, bolts and packing gland.
4. Remove old packing and replace with new.
5. Reverse steps reinstalling packing gland, gland flange, bolts nut and washers. Tighten nuts to below listed torque.

Gland Flange Bolt Torque

in	mm	
2"-6"	50-150	4 ft lbs
8"-14"	200-350	8 ft lbs
16"-24"	400-600	11 ft lbs
30"-36"	750	13 ft lbs

6. Cycle valve several times with wrench (being careful to not damage stem) and then reinstall operator.

Visit our website for the most current information.

OPERATION AND INSTALLATION

SOFT SEAT PARTS LIST

Part #	Designation	Material Description	ASTM #
1	Valve Body	Carbon Steel	A216 Gr. WCB
		316 SS	A351 Gr. CF8M
2	Insert Ring	Carbon Steel	AISI 1045
		316 SS	A276 Tp 316

20	Hex Bolt	304 SS	18-8 Stainless
21	Lock Washer	304 SS	18-8 Stainless
22	Socket Hd Screw	304 SS	18-8 Stainless

SEAT REPLACEMENT

1. Place valve on bench with seat retainer ring facing up. Remove all retainer ring cap screws and lift ring from valve. (Cap screws can be threaded into the tapped holes located at the 12 o'clock and 6 o'clock positions to aid in retainer ring removal.)
2. Remove old seat and discard.
3. Clean seat cavity and retainer ring. Clean and polish disc edge to remove any scratches that may interfere with sealing against seat.
4. Attach seat to seat ring.
5. Install seat and seat ring. Install seat ring bolts and torque in a cross pattern to below listed torques.

Seat Ring Bolt Torque

mm	
4	4 ft lbs
6	8 ft lbs
8	11 ft lbs
10	15 ft lbs

OPERATION AND INSTALLATION

DESIGN DETAILS

The NIBCO® Sure Seal® High Performance Butterfly Valve is a double eccentric (double offset) design. This design minimizes torque and increases valve service life by decreasing seat to disc interference throughout the disc travel. Valves are available in wafer and lug design for ASME Class 150# (2"-36") and Class 300# (2"-24"). The valve is bi-directional by design but has a recommended flow direction which is clearly marked on the valve body.

PRE-INSTALLATION INSPECTION AND PREPARATION

Before installation of the valve into the pipeline, it is recommended to inspect the valve as follows:

1. Check for any damage that might have occurred during shipping.
2. *Review metal tag attached to valve to ensure design, pressure class, and material of construction meet required application.
3. Remove the protective covers from the face of the valve, and clean or remove any foreign particles from the machined face of the valve. This is the gasket sealing area and keeping it clean will ensure proper sealing after installation.
4. Cycle the valve from the closed to fully open position to ensure that travel stops are adjusted to provide complete travel. The valve operates counter-clockwise to open and clockwise to close. A disc stop is an integral part of the valve design to stop over travel in a clockwise rotation. This stop should not be used for closure adjustment. If the valve disc is in contact with the stop the disc has traveled beyond the optimal sealing position.
5. Close valve. The valve should be in the closed position during installation to prevent damage to the disc sealing surface.

*Note: The metal tag affixed to every NIBCO Sure Seal High Performance Butterfly Valve is equipped with the valve size, pressure class and materials of construction. A second metal tag with an individualized serial number is also attached to allow tracking of the valve with regard to pressure test, assembly date and material test reports.

PIPELINE INSPECTION AND PREPARATION

1. Remove any foreign materials such as rust, welding slag or welding wire from the pipeline.
2. Clean the pipe flange to ensure good gasket contact
3. Check pipe and pipe flange I.D. to ensure adequate disc clearance.

WARNING:

Failure to properly clean the piping before start up can result in damage to the disc or seat. This could cause premature leakage and shorten the life expectancy of the valve.

INSTALLATION TOOLS

Installation tools are not included with the purchase of the NIBCO Sure Seal High Performance Butterfly Valve. The only required tool for installation of valve is a wrench suitable to tighten flange bolts and/or nuts. A hoist may be required for valve sizes exceeding manageable weights.

REQUIRED BOLTING

The tables on page 9 and 10 outline size, type and quantity of bolting recommended for the installation of valve. Bolting is not supplied with the purchase of valve. Recommendations are based on pipe flanges in accordance with ASME B16.5 (2"-24") and MSS SP44 (30"-36").

FLANGE GASKET

Valve is designed to work with fiber gaskets of 1/16" or less and metallic wound gaskets.

INSTALLATION

1. Ensure that disc is in the closed position.
2. Be sure to identify the direction of flow arrow on the valve and place in service accordingly. For optimal performance and to extend valve life, it is recommended to install the valve with the seat in the upstream position.
3. The valve can be installed in any position; horizontal, vertical or intermediate positions. For applications with solid particles present, it is recommended to install the valve with the stem in the horizontal position.
4. Align gasket with the valve and pipe flange. Gaskets are not supplied with valve. Valve is designed to work with fiber gaskets of 1/16" or less and metallic wound gaskets.
5. Install lower flange bolts without tightening to support valve between flanges.
6. Place remaining bolts through flanges and tighten in a diagonal or cross pattern to ensure uniform compression of gasket.

WARNING:

Failure to acknowledge the direction of flow in the pipeline and flow direction on the valve can shorten service life. Over torque of the flange bolts can lead to flange gasket damage and premature leakage.

VALVES

Pressure-rated bronze, iron and alloy-iron gate, globe and check valves • Pressure-rated bronze ball valves • Boiler specialty valves • Commercial and industrial butterfly valves • Lined butterfly valves • Circuit balancing valves • Carbon and stainless steel ball valves • ANSI flanged steel ball valves • Lined ball valves • Pneumatic and electric actuators and controls • Grooved ball and butterfly valves • High performance butterfly valves • UL/FM fire protection valves • MSS specification valves • Bronze specialty valves • Low pressure gate, globe, check and ball valves • Frostproof sillcocks • Quarter-turn supply stops • Quarter-turn low pressure valves • PVC and CPVC plumbing and industrial ball valves • Bronze & Iron Y-strainers • Sample valves • Sanitary valves • Lead-Free* valves • Coil-Connect® Kits

*Weighted average lead content ≤0.25%

FITTINGS

Wrot and cast copper pressure and drainage fittings • Cast copper alloy flanges • Wrot and cast press fittings • ABS and PVC DWW fittings • Schedule 40 PVC pressure fittings • CPVC CTS fittings • CPVC CTS-to-metal transition fittings • Schedule 80 PVC and CPVC systems • CPVC BlazeMaster® fire protection fittings • Lead-Free* fittings

BlazeMaster® is a registered trademark of The Lubrizol Corporation.

*Weighted average lead content ≤0.25%

FLEXIBLE PIPING SYSTEMS

PE-RT and PEX tubing for potable and radiant applications • Insulated tubing • Risers • Ice maker tubing • Silicon Performance Bronze® fittings • Poly alloy fittings • Home Run Manifold® • Radiant heat manifolds • Ball valves and supply stops • Connections, tools and accessories • Radiant heat controls and panels

INDUSTRIAL PLASTICS

Thermoplastic pipe, valves, and fittings in PVC, Corzan® CPVC, polypropylene and PVDF Kynar® • Pneumatic and electric actuation systems • BlazeMaster® CPVC fire protection fittings

BlazeMaster® and Corzan® are registered trademarks of the Lubrizol Corporation • Kynar® is a registered trademark of Arkema Inc.
